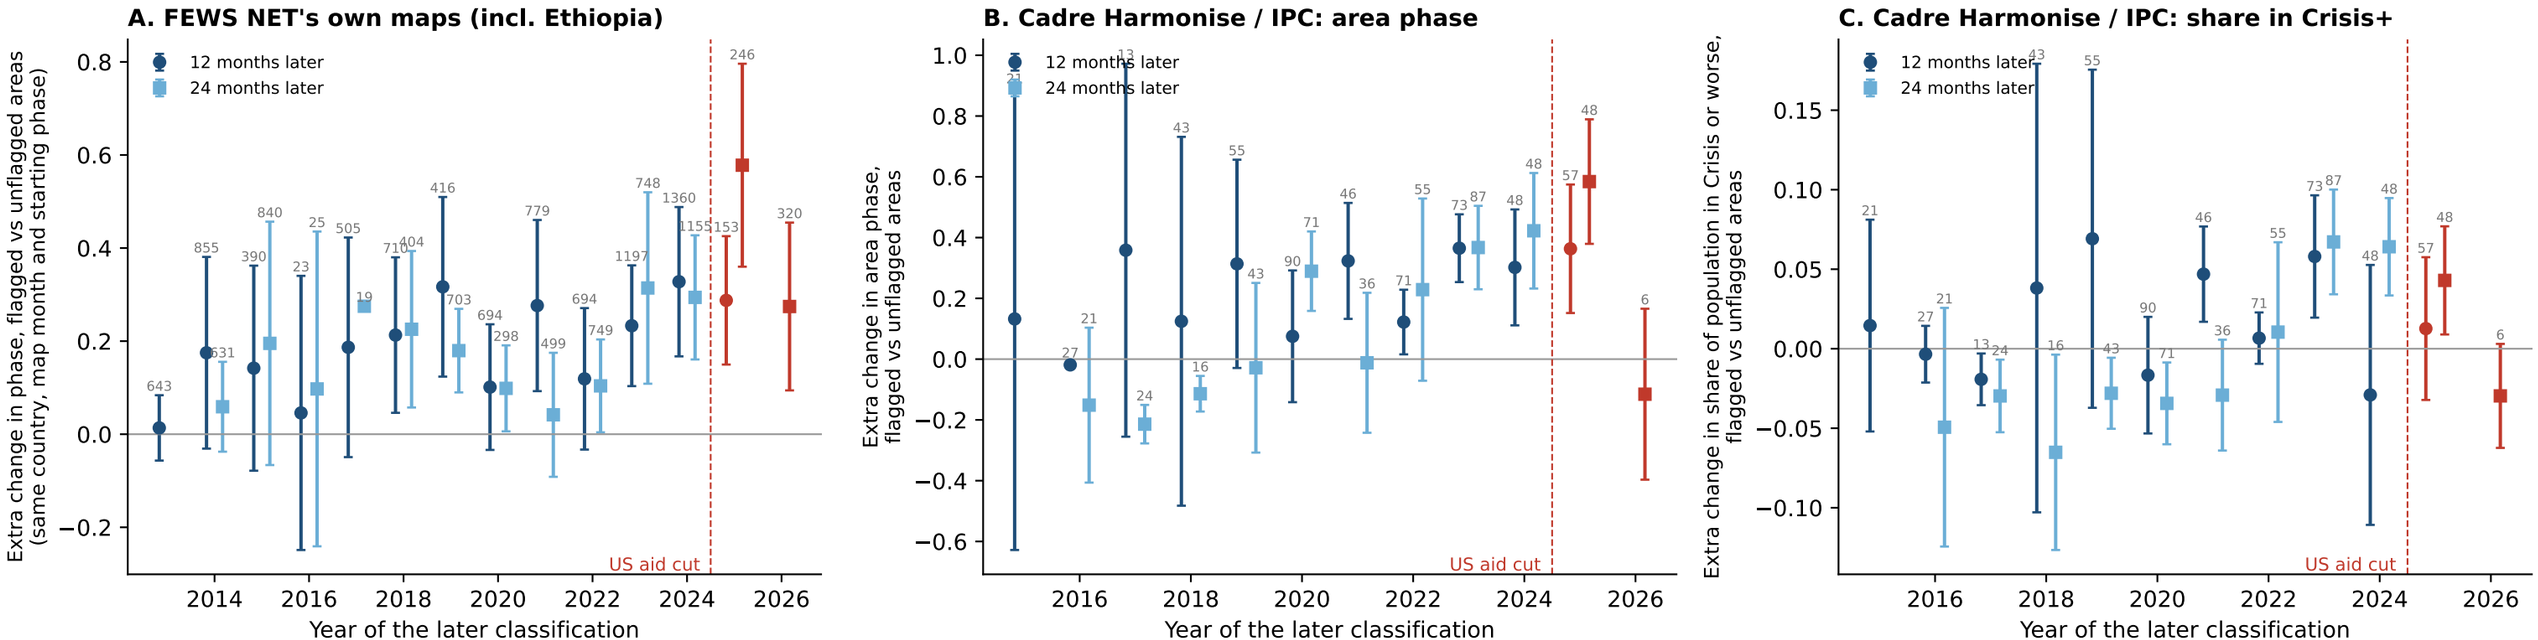
Did areas FEWS NET said were held up by aid deteriorate once aid was cut?



Flagged = FEWS NET marked the area '!' (humanitarian assistance keeping it at least one phase better) in the baseline map. Circles: change over 12 months; squares: over 24 months (same calendar month). Each point compares the change in flagged and unflagged areas that started in the same phase, country and month (FEWS NET areas in Phase 2-3 in panel A; in B and C, the flag is the share of the Cadre Harmonise / IPC area covered by flagged FEWS NET areas in a map made at most 4 months before the baseline analysis). Baselines are all before 2025. Red: later classification in 2025-26, after the US aid cut; blue: earlier years, the normal evolution of flagged areas. Small numbers: flagged observations. 95% intervals clustered by country.
