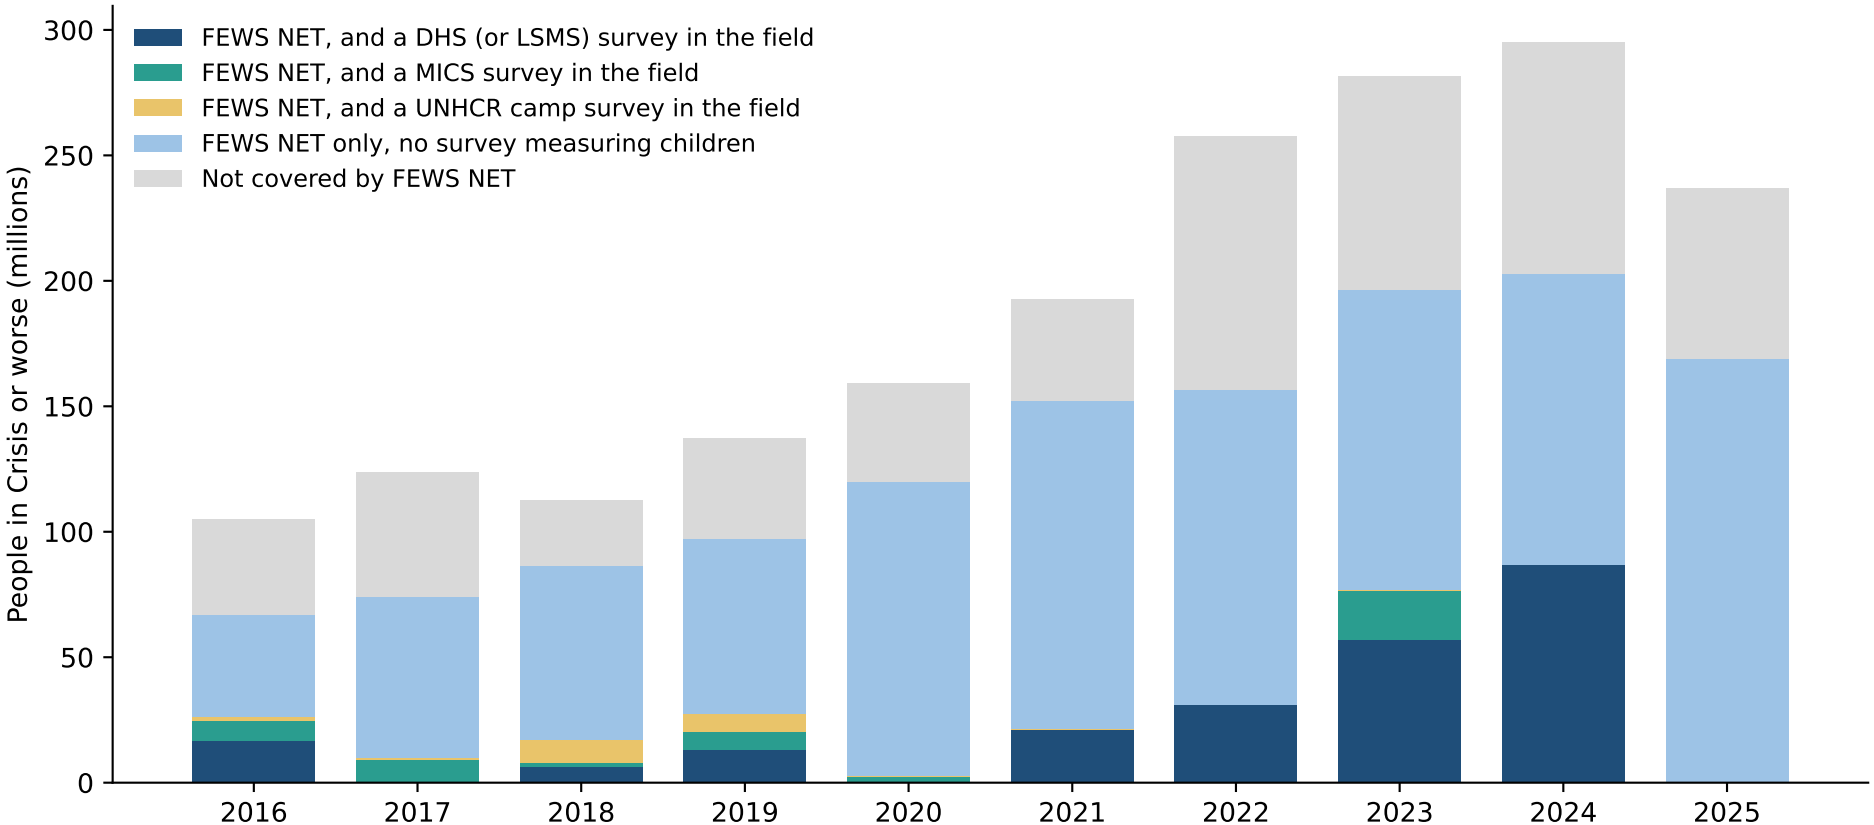
Who counted the world's hungry, and did anyone measure their children?



People in Crisis or worse (IPC Phase 3+) by country-year, from the Global Report on Food Crises database, 2016-2025. A survey is counted if its fieldwork fell in that year and it measured children's weight and height. Year-to-year changes partly reflect which countries had data. Sources: Global Report on Food Crises; FEWS NET; DHS Program; World Bank Microdata Library.
