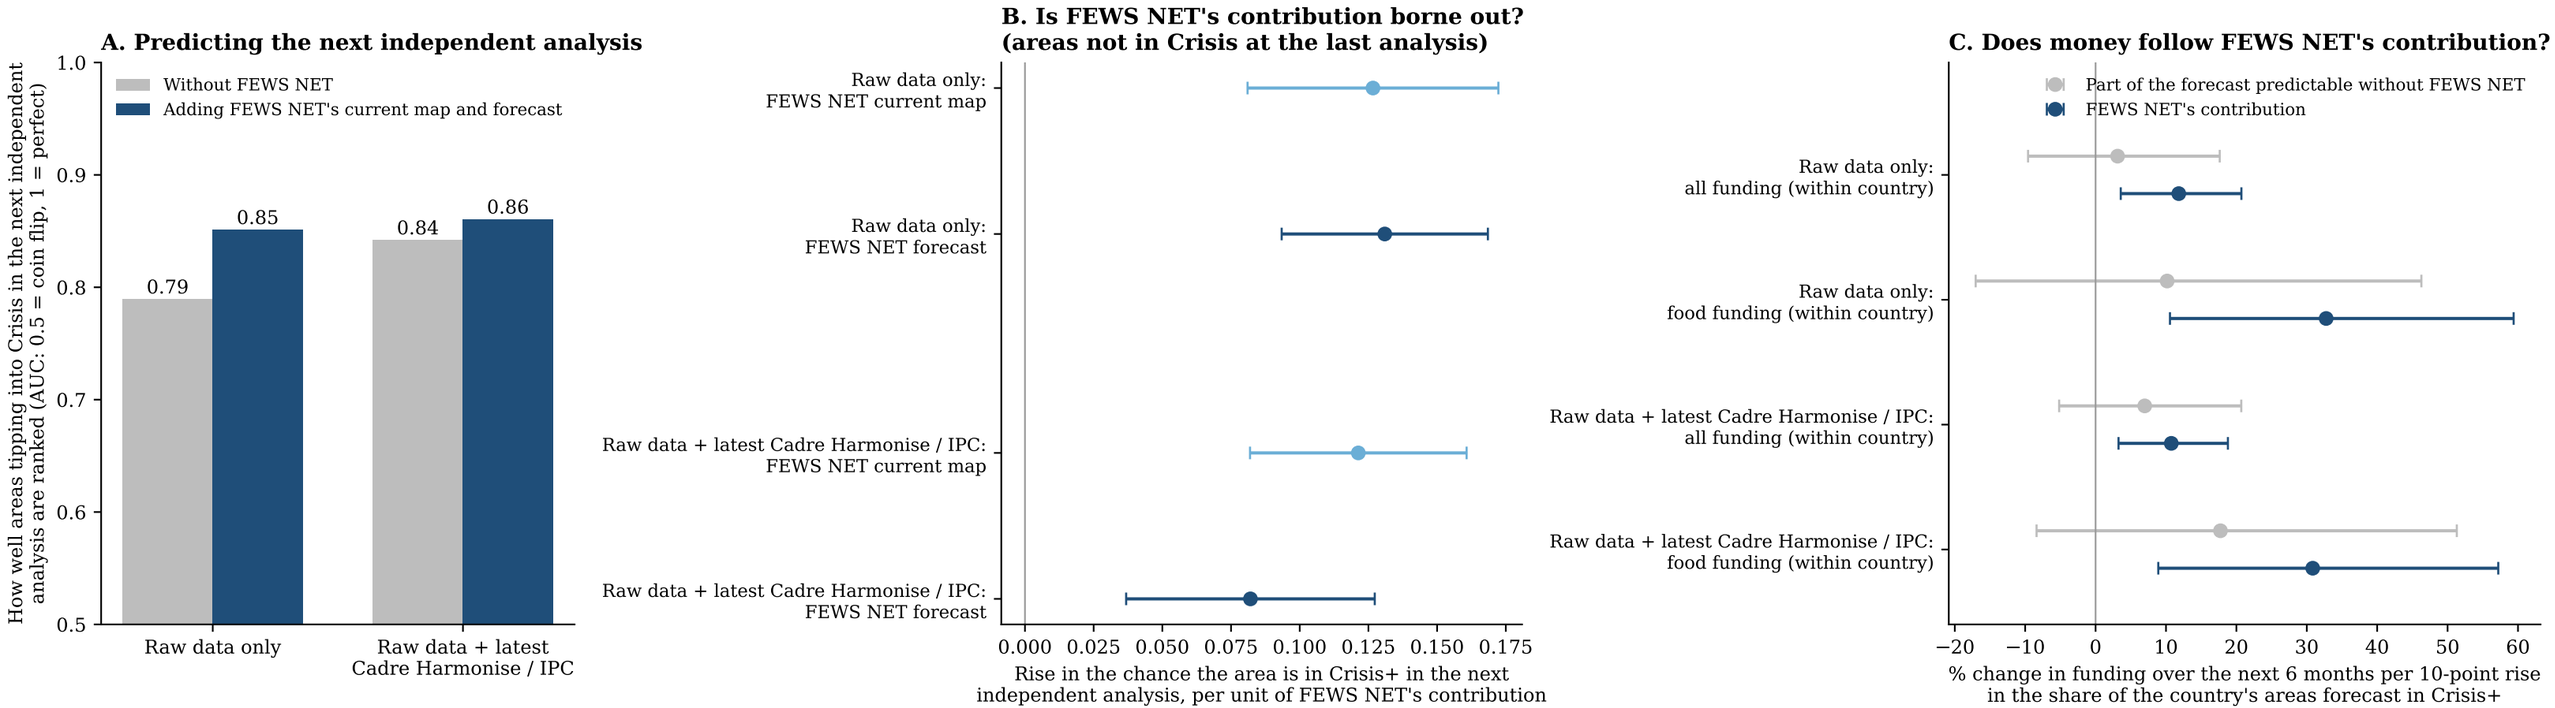
What would donors know without FEWS NET? Its contribution beyond raw data and other assessments (2011-2024)



Raw data: rainfall (CHIRPS), political violence (ACLED), cereal prices (WFP), country and season, all before the forecast. FEWS NET's contribution: its current map or medium-term forecast (Phase 3+) minus an out-of-year prediction of it from the baseline. A and B: Cadre Harmonise / IPC areas in 24 countries (21 with areas not in Crisis at the last analysis), FEWS NET signals overlaid by area; outcome is Phase 3+ in the next independent analysis; B compares areas in the same country and round, controlling for the baseline's own prediction of the outcome, clustered by country. FEWS NET analysts take part in many Cadre Harmonise / IPC analyses, so neither the baseline nor the outcome is fully independent of it. C: country x round, 28 countries, with prior funding, country and time fixed effects.
